KLAUER MANUFACTURING COMPANY

DUBUQUE, IOWA, U. S. A.

1-1-39 237

FOREWORD

Today, in new buildings as well as old, there is an increased demand for ceiling material that includes the all important factors of permanence, decorative effect, sanitation, and fire resistance. Klauer Perfection Metal Ceilings of steel meet these requirements and add the factor of comparative economy. The complete line includes various classes of design, from artistic Colonial patterns to very plain Moderns. The designs are somewhat flexible, permitting an interchange of field patterns, fillers and cornices to meet every individual preference. These are designs particularly appropriate for use in churches, schools, theatres, lodge rooms, public buildings, stores, and residences.

We maintain a special department for the handling of metal ceiling inquiries, and are in position to give prompt advice in regard to designs, prices, etc., for your particular requirements. With our large stock and manufacturing facilities we can make prompt shipment at all times.

GENERAL INFORMATION

With each ceiling we furnish a working plan showing exact arrangement of material shipped. Our plans are made in strict accordance with information furnished us, and we will not be responsible for errors due to changes or mistakes in information sent us. Additional material will be charged for extra.

Ceilings cannot always be arranged to accommodate lighting fixtures. All fixtures or drops should be placed so as to conform with the arrangement of the ceiling.

Our prices include wood brackets for cornices and molds requiring them.

Furring strips are never shipped unless ordered, and are charged for extra. When strips are ordered, we ship them of standard size $\frac{7}{8}$ in. x $1\frac{1}{4}$ in. Furring over plaster $\frac{7}{8}$ in. x $\frac{7}{8}$ in. may be used.

Our ceilings require no furring strips on wood sheathed surfaces.

TERMS

Regular: 30 days net or 2% for cash in 10 days.

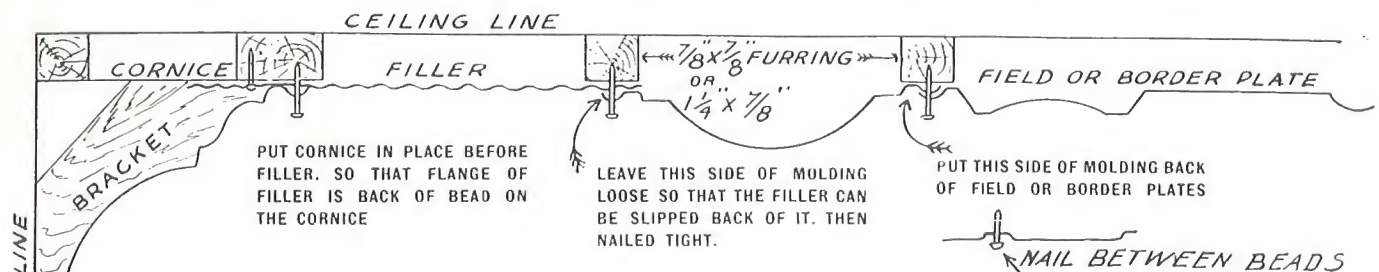

Where we have no previous acquaintance purchaser will avoid delay by furnishing bank guarantee or other reliable references.

The purchaser of limited responsibility when sending in order must include remittance for 25%

of the price of the material ordered, the balance to be subject to Sight Draft with Bill of Lading attached.

Whenever we are instructed to ship Sight Draft with Bill of Lading attached, purchaser should indicate the bank through which he wishes collection made.

DIRECTIONS FOR ERECTING METAL CEILING

With every ceiling we furnish a blue print or working drawing showing the exact size and arrangement of each member of the combination ceiling design; also a packing slip containing itemized list of material shipped, and a crate list showing number of crates in shipment and contents of each crate. These should be checked with the material immediately and if any shortage exists, have a shortage notation made on freight bill and notify us.

Study the plan carefully, and verify measurements, as this plan is made strictly in accordance with measurements and information furnished us, and ample allowance is made for cutting and laps. Additional material required on account of incorrect information, measurements, or changes, will be charged for extra.

Furring strips must be used when applying over plaster or joists. $\frac{7}{8} \times 1\frac{1}{4}$ strips are generally used. When applying over sheathing no furring strips are necessary, as Klauer patterns are not sunken.

Furring is placed at right angle with joists. Cross furring parallel with joists. When commencing erection first strike a chalk line from both ends at points indicated on working plan as "starting line."

Place the first wood strip on "starting line," and parallel with this place the balance of strips

12 inch on centers for plates excepting such 24-inch multiples as are rigid enough to stand stripping 24 inches on centers. Headers or cross stripping are placed at end of each plate.

Chalk lines should be struck for all cornices and moldings to insure an absolutely straight job. Wood brackets are furnished for all moldings and cornices large enough to permit of their use.

After the furring is up and leveled then field plates should be applied first, referring to the plan for starting point. The border or molding should be next applied leaving the outer edge un-nailed. The filler is next applied lapping one edge under the outer edge of mold or border which is then nailed securely. The cornice is then put up with the filler under lapping.

Erection should be started in the rear, working forward, as this brings the laps away from the light.

We furnish square miters for all cornices 4 inches and larger.

Practically the same instructions for stripping apply for sidewalls. Erect from bottom up to edge of cornice.

Painting: Metal Ceilings are primed one coat light gray pure linseed oil primer. To get the best effect in decoration, metal ceilings should be painted with dull or flat color paint, which brings out all the details of the pattern.

SIMPLE RULES FOR MEASURING

Metal Ceiling: The measurements and information furnished us must be exact or the material will not fit, and our working drawing will be incorrect.

In reporting measurements for plans make a rough sketch showing total width and total length of room, also exact size and location of any openings or offsets such as skylights, stairways, elevator shafts, chimneys, etc. Also state whether or not cornice can be used entirely around the room. In many buildings the

windows or glass fronts extend clear to the ceiling or else there is only space for a 2 or 3 inch deep cornice. It is important that this information be given on sketch.

A square of ceiling means 100 square feet.

Metal Sidewall: In sending in order or inquiry for sidewall material, sketch should show exact size and location of all openings, offsets or obstructions, also height from top of baseboard to ceiling, and the width or length of each wall.

ESTIMATING THE AREA

The lump sum cost of Steel Ceiling material for any room can be quickly figured by using the following method.

The number of squares required is obtained by adding twice the drop of the cornice, plus six inches for the lap of the filler, to the full length and width of the room, and multiplying the totals together. Make no deductions for skylight, stairway or other opening measuring less than 100 square feet.

Example: If the room measures 20x60 feet and Design No. 9112, having a 6-inch depth cornice, is desired, add 18 inches to length and width, as follows:

Size of room.....	20' 0" x 60' 0"
Add for 6-inch cornice.....	1' 0" 1' 0"
Add for lap of filler.....	6" 6"
	21' 6" x 61' 6"

equals 13.22 squares

FIGURING THE COST

Now multiply the number of squares by the proper list price per square of the design selected, as follows:

13.22 squares at \$8.75 per square,
total list price.....\$115.68
List prices include 4 cornice miters. Additional miters are extra.

This estimate is based on a plain rectangular room having no exposed beams or other irregu-

larities which might change the quantity of material or the list price of the design.

Nails for applying the metal ceiling are charged for extra.

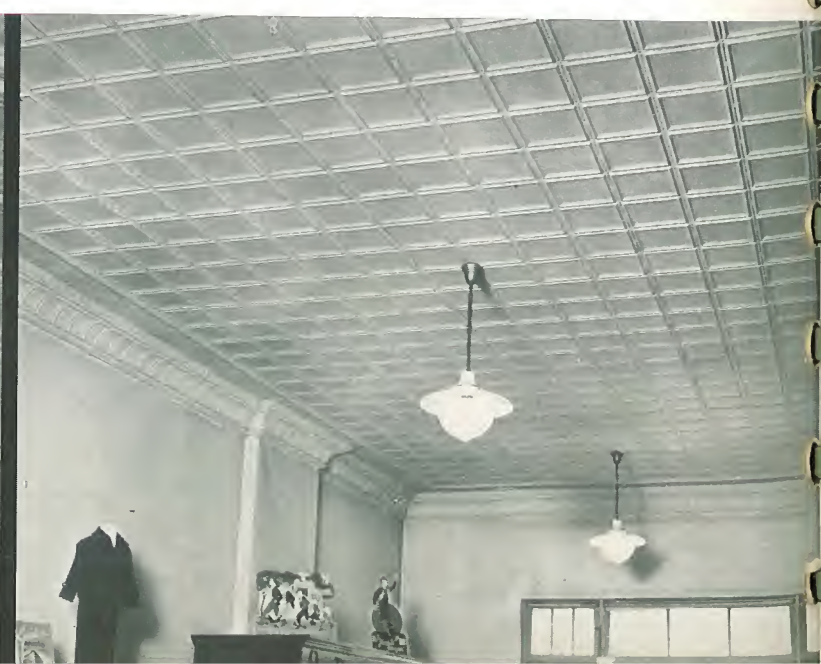

Wood furring strips are also extra but are not shipped unless ordered.

Beam covering figured extra at the individual list price.

All prices subject to a discount.

INSTALLATIONS

There are no limitations to the type business that can profitably use metal ceilings in the improvement of store appearance. In today's mode of decoration, a flat off-white paint, or any flat tint, applied over metal ceiling, accomplishes an effect that is impossible to achieve with any other ceiling material of equal cost. The design selected should naturally be in keeping with the general architecture and decorative scheme of the room. In the complete variety of designs offered in this catalog, there is an appropriate pattern for every requirement. In addition to offering a very fine decorative effect, metal ceilings are to a great extent fire resistant. Although there is no claim of their being fire-proof, they will resist a great many more degrees of heat and will turn away fire for a longer period of time than any other ceiling material. In any type of building, for any ceiling requirement, Klauer Perfection Metal Ceilings offer more enduring service and lasting satisfaction.

ILLUSTRATING THE FEATURE PATENTED
BEAD and NAILING BUTTON USED ON ALL
KLAUER PERFECTION METAL CEILINGS

The mechanical perfection of our metal ceilings saves at least 25% in erection time. The half oval bead gives the plate strength and rigidity while the STAMPED-IN NAILING BUTTON with countersunk head forms a self centering and absolutely accurate nailing point. It prevents the material from slipping, and enables the erector to place the nail in the correct position, thereby insuring erection speed, accuracy and permanence.

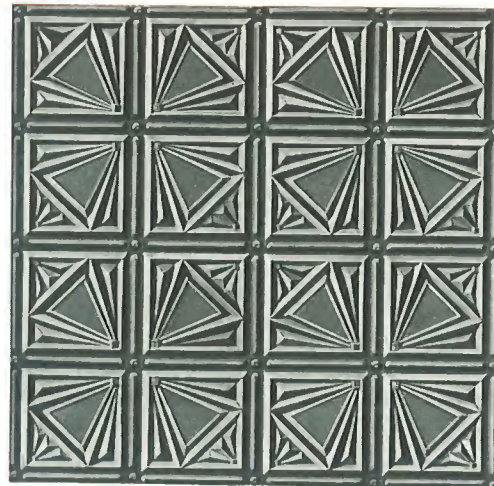

Assure an attractive installation and speedy erection by specifying Klauer Perfection Metal Ceilings.

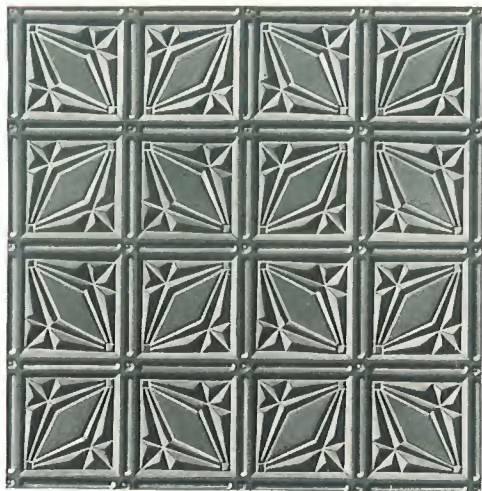

KLAUER *Perfection Steel Ceilings*

PANEL PLATE No. 6200
 8 Cents per square foot
Width, 24 inches. Length 98 inches.
 Covers, 24 inches by 96 inches
 (Cut shows half section in length)

Long Beads running length of plate insure rigidity. End crimps permit of fitting over joists 12, 16 or 24 inches on centers, requiring no stripping as plate is nailed only along each side. Construction or design of pattern permits adjustment of two inches lengthwise without any noticeable difference in the design.

PANEL PLATE No. 6300
 8 Cents per square foot
Width, 24 inches. Length 96 inches.
 (Cut shows half section in length)

This pattern is in 12-inch multiples and because of extra large bead is exceptionally rigid and easily erected. It is especially desirable for garages, warehouses, stores and other large spaces where a conservative, substantial design is required.
